

IT Advantage

SOFTWARE

How does our organization achieve a competitive advantage with software?

In today's business world, companies need to be able to use technology to better serve customers via improved internal processes and better communication with suppliers. How do you make sure you make the right technology choices? How do you successfully implement a new application on a limited budget and/or with a limited IT staff? How do you ensure that your company makes the right software technology choices today? And what about five years from now?

Outsourcing

Making sense of today's technologies can be very confusing, especially if you are not in the IT industry. ITAdvantage can help you focus on YOUR business, and help you apply the technologies that make sense for your company. The wrong choice in technology could cost you money and market share. Make sure you do it right the first time. Let ITAdvantage help you choose the kind of technology and the functionality you need.

e-Commerce

Being able to conduct secure business over the web is critical to your company's success in today's market. ITAdvantage has the experience and know-how to help your company use the web to improve your customer's satisfaction with your web store and increase security of internet transactions for you and your customers.

B2B

The Internet allows you to communicate instantly and securely with other businesses, whether they be suppliers or customers. Companies can now find out how long it will take to get components and products from vendors, making the ordering process more efficient.

Internet Applications

Selling products is not the only way companies can gain leverage using the Internet. The Internet can make your company more efficient by letting employees access critical information from anywhere over a secure connection. Employees will now be able to work together whether they are across the room or across the world from each other.

Wireless Applications

If you choose to allow customers and employees to be able to access your data from anywhere, wireless applications are the way to go. Today's technology lets you set up applications that can be accessed from a web browser on a traditional computer, a handheld device, or even a cell phone. Take advantage of the future today with wireless applications.

Application Development

Whether your company needs a wireless application, an Internet application, or even a traditional client/server application, the key to success is the development process. ITAdvantage uses industry proven processes to develop software that is on-time, on-budget and on-target. Contact us for a presentation of what we can do for your company.
